

# Lecture 3.

## The Engineering Profession: Hydraulic Engineers

---

Prof. Chérifa Abdelbaki

Faculty of Technology, University of Tlemcen

## **What is Water /Hydraulic Engineering?**

**A Engineering branch among other branches.**

***Water resources engineers are concerned with the problems associated with the use and control of water***

# Examples of Application of Water Resources Engineering

**Flash Flood in mountainous areas– needs protection**

**Landslide from heavy rainfall – needs protective measures**

**A dam for flood protection, storage, power, fishing and navigation**

**A water intake point (for consumption) from a stream**

# More Examples

**Water Treatment Plant draws water directly from a River. You cannot use directly**

**Wastewater Treatment plant – used water can not just be thrown back – it will kill the fishes and the environment. Must treat it first**

**Civil Engineers design and lay water distribution system for cities**

## **A More specific Example**

### **(Job Type for a Water Resources Engineer)**

*Design the water distribution and storage system.*

*Design life will be 25-50 years*

### **How will a Hydraulic Engineer do it?**

- ✓ Factor Population Growth
- ✓ Factor how much water is needed (after 25 years)
- ✓ Is the water available enough to meet demand?
- ✓ Factor how much water is available (from groundwater, rivers, lakes)
- ✓ No – then plan storage system (reservoir) – But how big should it be?

## How do Hydraulic Engineers Find out How much Water is Available?

In Water resources engineering, we study the 'water cycle'

This is the cycle that describes how water is moving around us (rainfall, groundwater, river water, evaporation etc.)

The name of the course is '**HYDROLOGY**'

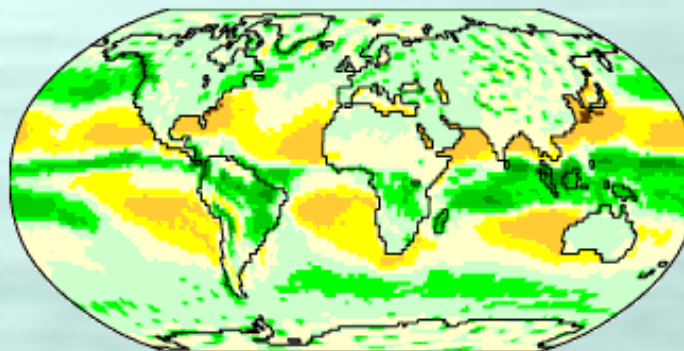

# The Global Water Cycle

Precipitation

10 50 100 200 400 mm

P-E

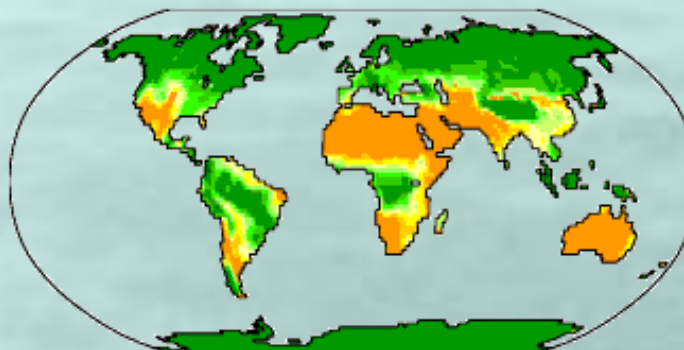

-200 -100 -50 0 50 100 200 mm

Run Off/Water Surplus

.01 10 20 40 60 80 100 mm

Soil Moisture

.15 .18 .21 .24 .27 .30 .33 .36 .40 cm

Dec

**Satellites Can Also Help Study Rainfall variability - Hydrologic Cycle**

Data: NCEP/NCAR Reanalysis Project, 1959-1997 Climatologies  
Animation: Department of Geography, University of Oregon, March 2000

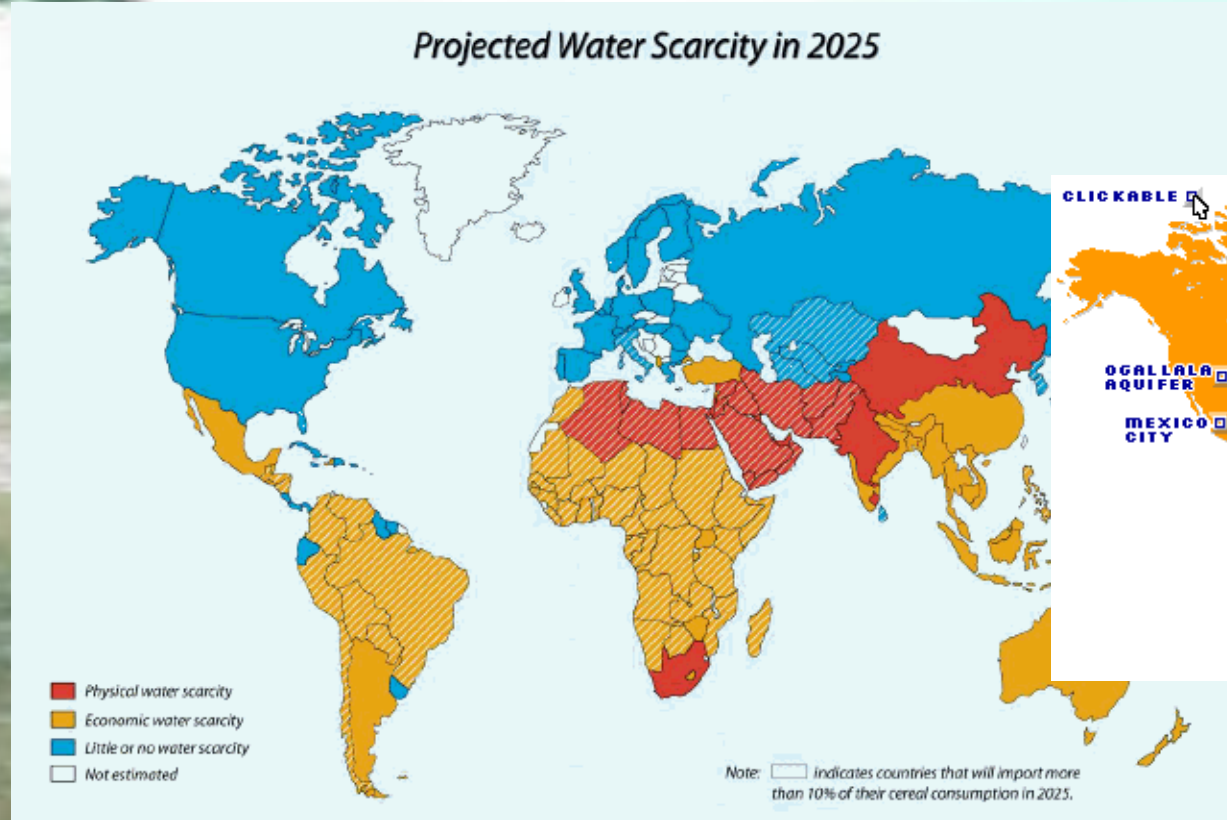

# Water is More Important than Ever Before

*Several researchers found that population growth and economic development, in tandem with global climate change, will impact the availability of fresh water over the first quarter of this century.*

# Water-related Hazard – 1

## Global Water Scarcity (Too Little Water)

### Hot Spots for Wars

# Water-related Hazard – 2

## Global Floods (Too Much Water)

***At least 10 million displaced and 2000+ death annually due to Floods caused by widespread rainfall***

# Cutting-edge Technology that Water Resources Engineering Will Use in Future

Engineers studying Hydrology will have to learn to deal with satellites soon.

Satellites can measure:

Rainfall, River discharge, soil moisture, evaporation from soils, soil temperature,

Track Hurricanes

# Courses on Water Resources Engineering

1. Fluid Mechanics is a prerequisite for any CEE water-resources courses
2. Fundamentals courses (theory)
3. Engineering' aspect (application) Engineering Hydrology (on water cycle and hydrologic modeling)
4. Water Resources Engineering (on management of water resources systems)

# Hydraulic Department, Faculty of Technology, University of Tlemcen

## 1. Dr. Lotfi Benadda

Associate Professor, PhD

<https://ft.univ-tlemcen.dz/fr/pages/152/d-partement-d-hydraulique>

# Job Opportunities

Studying Water Resources Engineering widens job opportunities within the Civil Engineering domain.

Some fun places where you can work are:

**ANBT** – building dams, navigation, power generation

**AGIRE** – flood protection, Integrated Water Resources Management

**ONIDE:** Irrigation and Drainage

**ANRH**– protecting the water bodies from contamination , environmental aspects and Water quality

**DRE/ ADE:** Any Town or City needs Water Resources Engineers for planning and management of distribution systems

**ONA** – Sanitation and Wastewater treatment

**Insurance Companies** (Lots of money) – Guess why?

**Any questions??**
