

Activity: translate the following passages into French.

- 1- Sewerage is the physical infrastructure, including pipes, pumps, screens, channels etc. used to convey sewage from its origin to the point of eventual treatment or disposal. It is found in all types of sewage treatment, with the exception of septic systems, which treat sewage on site.
- 2- Wastewaters generated in areas without access to centralized sewer systems rely on on-site wastewater systems.
- 3- The management of wastewater belongs to the overarching term sanitation, just like the management of human excreta, solid waste and storm water (drainage).
- 4- Soluble iron salts produce pale yellow or green solutions; some copper salts form intensely blue solutions.
