

Web and medical ontologies

Introduction

For you...

What is the meaning of « [internet](#) »?

For you...

What is the meaning of « [internet](#) »?

What is the meaning of « [the Web](#) »?

Internet

- A global (supranational) network of interconnected machines.

Internet

A global (supranational) network of interconnected machines.

- A network of networks

Internet

A global (supranational) network of interconnected machines.

- A network of networks
- A communication protocols

Internet

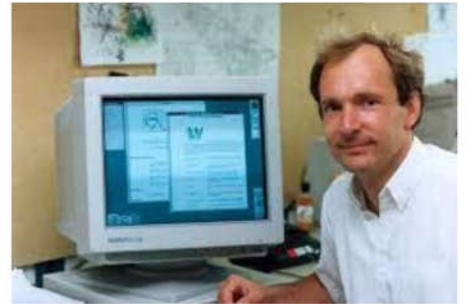

A global (supranational) network of interconnected machines.

- A network of networks
- A communication protocols
- Numerous applications: email, file transfer (ftp), instant messaging, [world Wide Web](#).

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*” = **web documents**

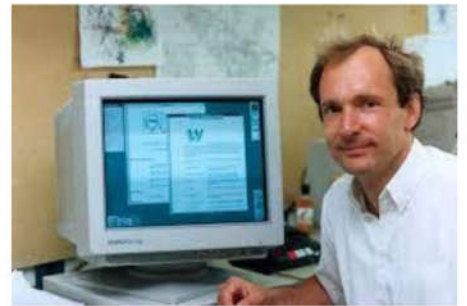

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*» =**web documents**
- based on the notion of **hypertext** and the notion of **hyperlinks**

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*» =**web documents**
- based on the notion of**hypertext** and the notion of**hyperlinks**
- allowing you to navigate between web documents

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*» =**web documents**
- based on the notion of**hypertext** and the notion of**hyperlinks** allowing you to navigate between web document
- communication protocols **HTTP,HTTPS**

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*» =**web documents**
- based on the notion of**hypertext**and the notion of**hyperlinks**
- allowing you to navigate between web document
- communication protocols **HTTP, HTTPS**
- addresses to name the documents:**URL** (Uniform Resource Locator)

The web

THE **Web** (Tim Berners-Lee, 1989)

- relies on the internet
- information system divided into “*web pages*” = **web documents**
- based on the notion of **hypertext** and the notion of **hyperlinks**
- allowing you to navigate between web document
- communication protocols **HTTP, HTTPS**
- addresses to name the documents: **URL**
- languages to create documents: **HTML, CSS, javascript** of the **browsers** who interpret the documents

W3C

The W3C ...

“World Wide Web Consortium”

W3C

THE W3C

“World Wide Web Consortium”

- An organism of **standardization** responsible for promoting the compatibility of web technologies
- ***“one web everywhere and for everyone»***
